SQ_L QUERIES

```
SELECT * FROM db_name.tb_name  
WHERE class = 10;
```

Filters the score table to show records where the class is 10.

```
SELECT * FROM db_name.tb_name  
WHERE MONTH(year) = 6;
```

Retrieves records where the year column falls in the month of June.

```
SELECT * FROM db_name.tb_name  
WHERE payment_mode = "cash";
```

Filters the score table to show records where the payment_mode is "cash".

```
SELECT * FROM db_name.tb_name  
WHERE fee IS NULL;
```

Retrieves records from the score table where the fee field is empty or not specified.

```
SELECT SUM(marks1), SUM(marks2),  
SUM(marks3), SUM(marks4) FROM  
db_name.tb_name WHERE month =  
"Aritra Biswas";
```

Calculates the sum of marks for marks1, marks2, marks3, and marks4 for the person named "Aritra Biswas".

SQ_L QUERIES

```
SELECT * FROM db_name.tb_name;
```

Retrieves all columns and rows from the registration table in the db_name.

```
SELECT * FROM db_name.tb_name  
WHERE Gender = "Male";
```

Filters the registration table to show records where the gender is "Male".

```
SELECT * FROM db_name.tb_name  
WHERE city LIKE "A%";
```

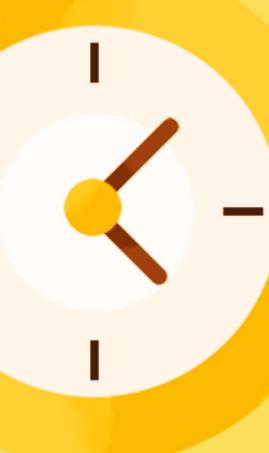

Retrieves records where the city column starts with the letter 'A'.

```
SELECT * FROM db_name.tb_name  
WHERE phone IS NULL;
```

```
SELECT * FROM db_name.tb_name  
WHERE whatsapp IS NULL;
```

Retrieves records from the registration table where the whatsapp field is empty or not provided.

SQL QUERIES

```
SELECT DISTINCT name FROM db_name.tb_name;
```

Retrieves unique names from the score table.

```
SELECT COUNT(DISTINCT class) FROM db_name.tb_name;
```

Counts the number of unique classes in the score table.

```
SELECT DATEDIFF(CURDATE(), year) AS diff FROM db_name.tb_name WHERE month = "Aritra Biswas";
```

Calculates the difference in days between the current date and the year column for the person named "Aritra Biswas".
